/ 1. Glossary

En el glosario de esta unidad, encontraremos expresiones que nos permitirán utilizar un vocabulario adecuado al contexto en que nos encontramos en nuestra familia profesional. Para ello, estudiaremos los términos que encontramos a continuación.

An **operating system** is a type of software that manages a computer's hardware and allows the user to perform basic operations on a computer.

Hardware is the physical components of a computer.

A **device driver** is a program that allows a computer to interact with additional devices.

A **BIOS** (Basic Input Output System) is a set of instructions in firmware that controls a device's input and output operations.

Firmware is a fixed data structure or program used to control an electronic device.

/ 2. Listening

En este apartado practicaremos la comprensión oral. En el audio escucharemos una conversación entre dos estudiantes. Completa los huecos con las palabras que faltan y añade estos conceptos a tu vocabulario para poder utilizarlas cuando las necesites.

1. Listen and complete the conversation between two students. Then, answer the quiz.

Audio. "System Software 1. Unit 2. Listening"

Student 1: What did you think of that assignment about early system 1) _____.

Student 2: That was a really 2) _____ assignment!

Student 1: I thought so, too. I can't believe people used to enter everything manually.

Student 2: I know what you mean. I'm ready to study modern operating 3) _____.

Student 1: I agree. They're so much easier to use.

Student 2: Are you ready for the 4) _____ tomorrow?

Student 1: I need to review that 5) _____ again.

Student 2: Don't forget to 6)_____about device drivers.

Student 1: I'm not too worried about that.

2. Use the words below to complete the quiz on system software.

QUIZ ON SYSTEM SOFTWARE	
Write the function of each type of software in the space provided.	
Software	**Function**
Operating system	manages hardware, allows a user to perform functions
_____	allows a computer to interact with additional devices
Windowing system	organizes _____ into_____ for easy _____.

/ 3. Reading

En este apartado, vamos a trabajar la comprensión escrita sobre las nociones básicas del software. Lee el texto, señala el nuevo vocabulario y realiza el ejercicio que se muestra a continuación.

System Software 1

A system software is any program that allows computers to perform basic operations. The earliest computers **operated** with only basic software support. Users **manually** entered commands into a computer. This required specialized knowledge and lots of patience.

Now, computers come with sophisticated **operating systems**. These systems manage both the **hardware** and software of a computer. Users **control** their computer's operations easily with **windowing systems**. These allow even beginners to perform complicated operations.

Most modern computers come with pre-installed **device drivers**. These control the unit's operating system. Other components ensure that peripherals work with the operating system. Sophisticated **BIOS** in the **firmware** performs this function.

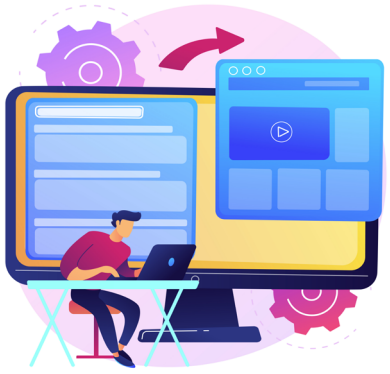

Fig.1. System Software

1. Read the textbook chapter. Then, choose the correct answers.

What is the main idea of the chapter?

a) differences between old and new system software

b) costs of developing different types of system software

c) methods for developing system software

d) types of jobs available for system software developers

Which of the following is a system software NOT used for?

a) managing a computer's hardware

b) allowing a user to enter commands into a computer

c) letting a computer run applications

d) installing firmware on a computer

What is the benefit of a windowing system?

a) It manages a computer's device drivers.

b) It simplifies computer operations.

c) It costs less than basic support software.

d) It allows users to enter commands manually.

2. Read the sentence pairs. Choose which word or phrase best fits each blank.

hardware / firmware

A) A computer's keyboard and monitor are part of its_____ .

B) Information about a computer's operating system is stored in the_____ .

system software / device driver

A) The_____ dictates how a computer interacts with peripherals.

B) A _____ allows a user to run additional programs on a computer.

/ 4. Soluciones

Solución ejercicio Listening

1. Listen and complete the conversation between two students. Then, answer the quiz.

1) software

2) hard

3) systems

4) quiz

5) chapter

6) study

2. Use the words below to complete the quiz on system software.

QUIZ ON SYSTEM SOFTWARE	
Write the function of each type of software in the space provided.	
Software	**Function**
Operating system	manages hardware, allows a user to perform functions
Device driver	allows a computer to interact with additional devices
Windowing system	organizes **applications** into **boxes** for easy **navigations**.

Solución ejercicio Reading
