/ 1. Glossary

En el glosario de esta unidad, encontraremos expresiones que nos permitirán utilizar un vocabulario adecuado al contexto en que nos encontramos en nuestra familia profesional. Para ello, estudiaremos los términos que encontramos a continuación.

- **Anti-virus software** is a type of security software that removes malware, or prevents its installation.
- **Spyware** is a type of malware that records personal information about a user, usually for the purpose of reporting it to an unauthorized party.
- **Malware** is computer software that is designed to disrupt computer functions or cause harm to a user's computer.
- **Removal** is the act of taking something out of or away from somewhere.
- To **deny** something is to refuse it.

/ 2. Listening

En este apartado practicaremos la comprensión oral. En el audio escucharemos una conversación entre un director de empresa y un ingeniero informático. Completa los huecos con las palabras que faltan y añade estos conceptos a tu vocabulario para poder utilizarlas cuando las necesites.

1. Listen to a conversation between a company manager and a software engineer. Choose the correct answers.

1. What is the main idea of the conversation?

   a. how much damage was caused by a virus

   b. which information was stolen by a spyware program

   c. why the company should update its antivirus software

   d. what caused a failure in the company's firewall

2. What prediction does the woman make?

   a. Unauthorized users will attempt to access the network again.

   b. The company's systems will be damaged by a virus.

   c. A new firewall will probably not be effective.

   d. The company's files will need to be quarantined.

2. Listen again and complete the conversation.

Engineer: Well, Mr. Clay. I removed the 1)_____from your company's system.

Manager: Oh, thank you! Our systems contain a lot of 2)_____ information.

Engineer: Yes, I can see that. If you don't update your 3)_____ software, you could really be in trouble.

Manager: Really? You think this will 4)_____ again?

Engineer: Whoever wanted your information is likely to 5)_____ trying.

Manager: I guess we'd better 6)_____the company's antivirus software, then.

Engineer: Definitely. And I recommend a better firewall.

Manager: What does that do?

Engineer: That makes it harder for unauthorized users to access the company's network.

/ 3. Reading

En este apartado, vamos a trabajar la comprensión escrita sobre el software de seguridad. Lee el texto, señala el nuevo vocabulario y realiza el ejercicio que se muestra a continuación.

System Software 2

Security threats can cause serious damage to your computer. SharpAlert offers excellent **security software** to keep your computer safe.

Antivirus Software – Don't let unauthorized parties steal your personal information with **spyware**! And stop **viruses** before they destroy your computer. The SharpAlert Exviro package protects against all types of **malware**. It quarantines infected files. Then threat **removal** just takes one click.

Firewalls – Remember to update network security programs regularly. SharpAlert's Steelbar firewall **permits** access only to authorized users. It will **deny** access to anyone without proper credentials. Make sure your confidential information stays confidential!

Fig.1. System Software

1. Read the webpage. Then, mark the following statements as True or False.

A. The company's Exviro package includes protection against spyware.

B. The antivirus software destroys files that are infected by malware.

C. The webpage recommends using antivirus software instead of firewalls.

2. Match the words with the definitions (A-C).

A. The purpose of the software is to not allow access to unauthorized users. B. The system allows access only after users enter their passwords. C. A program that protects a computer from various threats on the company's systems.	permits security software deny
