/ 1. Glossary

En el glosario de esta unidad, encontraremos expresiones que nos permitirán utilizar un vocabulario adecuado al contexto en que nos encontramos en nuestra familia profesional. Para ello, estudiaremos los términos que encontramos a continuación.

- **Kernel** refers to the core part of an operating system that manages system resources and communication between hardware and software.
- **User Interface (UI)** refers to the means by which the user interacts with a computer, including graphical user interfaces (GUIs) and command-line interfaces (CLIs).
- **Multitasking** is the ability of an operating system to run multiple tasks or programs at the same time.
- **Virtual Memory** is a memory management capability that provides an "illusion" of a very large main memory by using disk storage to expand physical memory.
- **File System** is the method and data structure an operating system uses to manage files on a disk or partition, including how files are named, stored, and organized.

/ 2. Listening

En este apartado practicaremos la comprensión oral. En el audio escucharemos una conversación entre dos personas hablando acerca de varios sistemas operativos. Después, completa las preguntas sobre la conversación.

1. Listen and answer the following questions.

a. What is Alex's main problem?

b. What does Jamie suggest is fantastic for graphic design?

c. Why does Alex think Linux might be a good choice?

d. Does Alex eventually decide on an operating system?

e. Which operating system does Jamie say is well-balanced?

/ 3. Reading

En este apartado, vamos a trabajar la comprensión escrita sobre la importancia de tener un buen sistema operativo. Lee el texto, señala el nuevo vocabulario y realiza el ejercicio que se muestra a continuación.

The Importance of a Good Operating System

An operating system (OS) is essential for any computer. It is the software that manages all hardware and software resources. Without an OS, a computer cannot function properly.

A good operating system makes computers easy to use. It allows users to run applications like word processors, web browsers, and games. The OS also manages files, ensuring that data is stored and retrieved efficiently.

Security is another important feature of an operating system. A good OS protects your computer from viruses and hackers. It has built-in security measures like firewalls and antivirus programs.

Performance is also crucial. A good operating system optimizes the use of the computer's memory and processing power. This means that programs run smoothly without crashing or slowing down.

Different operating systems are designed for different needs. Windows, macOS, and Linux are popular examples. Each has its own strengths. For example, Windows is widely used in businesses, macOS is popular for graphic design, and Linux is favored by programmers for its open-source nature.

In summary, a good operating system improves usability, security, and performance. It is the backbone of any computer system, making it vital for both personal and professional use.

Audio Reading. "Operating systems"
https://on.soundcloud.com/6MVZ5TE13qQKQe5q9

1. Read the text. Then, choose the correct answers.

A. What is the main function of an operating system?

a. To manage hardware and software resources

b. To create documents.

c. To design websites

d. To run video games

B. What feature of an OS protects against viruses and hackers?

a. File System

b. Kernel

c. Security measures

d. User interface

C. According to the text, which of the following is NOT mentioned as a feature of a good operating system?

a. Easy usability

b. File management

c. Built-in security measures

d. Internet browsing

D. What is a key skill in IT related to operating systems as mentioned in the text?

a. Writing code for games

b. Repairing computer software

c. Understanding how an OS works and choosing the right one

d. Designing web pages

E. According to the text, how does a good OS contribute to a computer's performance?

a. By adding more software

b. By optimizing memory and processing power usage

c. By reducing the need for software updates

d. By increasing internet speed

/ 4. Soluciones

Solución ejercicio Listening

1. Listen and answer the following questions.

» a. What is Alex's main problem?

› **He is getting a new computer so he needs to choose an operating system.**

» b. What does Jamie suggest is fantastic for graphic design?

› **MacOS.**

» c. Why does Alex think Linux might be a good choice?

› **It's great for coding.**

» d. Does Alex eventually decide on an operating system?

› **No, but he will think about it.**

» e. Which operating system does Jamie say is well-balanced?

› **Windows.**
