/ 1. Glossary

En el glosario de esta unidad, encontraremos expresiones que nos permitirán utilizar un vocabulario adecuado al contexto en que nos encontramos en nuestra familia profesional. Para ello, estudiaremos los términos que encontramos a continuación.

- **Machine learning** is a type of AI where computers learn from data to improve over time.
- **Neural network** is a computer system modeled on the human brain that helps AI learn from data. For example, it can be used in image recognition.
- **Natural Language Processing (NLP)** refers to the field of AI that helps computers understand and respond to human language.
- **Algorithm** is a set of rules a computer follows to solve problems or complete tasks.
- A **bug** is a mistake or error in a computer program that causes it to work incorrectly.

/ 2. Listening

En este apartado practicaremos la comprensión oral. En el audio escucharemos una conversación que muestra diferentes ejemplos de aplicación de la IA en distintos contextos laborales. Después, completa las preguntas sobre la conversación.

1. Listen and choose True or False.

A. Emma has been using AI to improve their e-commerce platform.

B. Alex's use of AI in customer service has helped increase customer satisfaction.

C. Sophie's project involves implementing machine learning algorithms in cybersecurity.

D. Jake believes that AI has limited potential for innovation and problem-solving.

E. Emma thinks the future of AI will be revolutionary.

/ 3. Reading

En este apartado, vamos a trabajar la comprensión escrita sobre la Inteligencia Artificial, una de las tecnologías habilitadoras digitales más conocidas y usadas en la actualidad. Lee el texto, señala el nuevo vocabulario y realiza el ejercicio que se muestra a continuación.

Digital Enabling Technologies: AI

Artificial Intelligence, or AI, is a technology that makes computers think and learn like humans. AI can understand speech, recognize images, and even play games. It is used in many areas of our daily lives.

In the IT field, AI helps in different tasks. For example, chatbots are AI programs that talk to customers online. They answer questions and help solve problems quickly. AI is also used in data analysis. It looks at large amounts of data to find patterns and make predictions. This helps companies make better decisions.

Another use of AI is in machine learning. Machine learning is a type of AI where computers learn from data. For example, a computer can learn to recognize faces in photos after seeing many pictures of faces. This technology is used in security systems to identify people.

AI can also help in developing software. It can write code, find bugs, and suggest improvements. This makes the work of software developers easier and faster.

In conclusion, AI is a powerful tool in the IT world. It helps in communication, data analysis, security, and software development. Learning about AI is important for anyone interested in technology.

2. Match the words or phrases with the definitions (A-E).

A. Uses AI to identify people and ensure safety. B. The process of examining large amounts of data to find patterns and make predictions. C. A program that talks to customers online and answers questions. D. A type of AI where computers learn from data to perform tasks like recognizing faces in photos. E. A technology that makes computers think and learn like humans.	Artificial Intelligence (AI) Chatbot Data Analysis Machine Learning Security Systems

/ 4. Soluciones

Solución ejercicio Listening

1. Listen and choose True or False.

A. Emma has been using AI to improve their e-commerce platform. **False**

B. Alex's use of AI in customer service has helped increase customer satisfaction. **True**

C. Sophie's project involves implementing machine learning algorithms in cybersecurity. **False**

D. Jake believes that AI has limited potential for innovation and problem-solving. **False**

E. Emma thinks the future of AI will be revolutionary. **True**

Solución ejercicio Reading

2. Match the words or phrases with the definitions (A-E)

A. Uses AI to identify people and ensure safety.	Security Systems
B. The process of examining large amounts of data to find patterns and make predictions.	Data Analysis
C. A program that talks to customers online and answers questions.	Chatbot
D. A type of AI where computers learn from data to perform tasks like recognizing faces in photos.	Machine Learning
E. A technology that makes computers think and learn like humans.	Artificial Intelligence (AI)
